

## Sharing your work

This exercise aims to allow you to familiarize yourself with publishing your conformance resources and creating an implementation guide.

In this exercise, you will use the Simplifier platform.

The Alpha Hospital wants to share the profiles, so other systems can be implemented to connect to the hospital.

### Exercises

1. Before sharing, make sure to check the relevant fields, such as status, version, author information, etc.  
You can change them in your FSH file with the caret (^) notation.
2. To share your work, you will upload your conformance resources to Simplifier.net.
  - If possible, create a zip file containing all your conformance resources.
  - Go to Simplifier.net, login, and go to your portal by clicking on your avatar in the top-right corner.
  - Select the project that was created by the trainer.
  - Upload your conformance resources (profiles, extensions, valueset) to Simplifier.net by clicking on Upload → Upload file.
  - You can either upload the zip file or repeat the upload procedure for each conformance resource separately.
3. (optional, time permitting) Create an ImplementationGuide
  - From your Simplifier project, click on Guides.
  - Click on Create to create a skeleton guide.
  - Fill in some information about your project and try to add a rendering of one of your conformance resources.
  - Click on the Help button on the bottom-left of the screen if you want to get help on formatting or on the rendering options.
  - When you have saved your work, you can click on Browse at the top-right to see the site that has been created for displaying the guide.
